

EDWARD CHAN

IT Operations, Cybersecurity & Automation Assistant

+852 55117745 edwardcc082009@gmail.com github.com/Imaodick1239

PROFESSIONAL SUMMARY

Computer Science and IT student with hands-on experience in SIEM-based event-log analysis, incident-response workflows, network fundamentals, Python automation, and application development. Analyzed raw event logs and reconstructed multi-stage attack scenarios in Splunk Boss of the SOC (BOTS), finishing in the Top 10 in 2025. Also developed Python and C# tools, PyQt desktop applications, and serverless functions, bringing a practical programming and automation mindset to IT operations and security problem-solving.

EDUCATION

2026 - 2028 Hong Kong Baptist University - School of Continuing Education	Higher Diploma in Data Science (CLAP-TECH Pathway) Expected Start Date: 2026/09/01
2024 - 2025 Hong Kong Baptist University - School of Continuing Education	Tech Basics (CLAP-TECH Pathway) Attained Distinction II. Completed IBM P-TECH-aligned coursework in Python data programming, networking fundamentals, and data analysis using Pandas and Excel. Selected for industry immersion at Equinix Data Center and participation in the Splunk BOTS competition.
2020 - 2026 Lai King Catholic Secondary School	Secondary Education Key Results: Level 5 in English Language, Level 5 in Information & Communication Technology (ICT), Level 3 in Mathematics.

PROJECTS

Security Log Analysis & Incident Response Simulation | Splunk BOTS

- Analyzed raw event logs in a competitive SIEM environment to investigate simulated enterprise security incidents.
- Executed incident-response workflows and reconstructed multi-stage attack scenarios.
- Achieved a Top 10 finish in Splunk Boss of the SOC (BOTS), 2025.

Automated Data Parsing Desktop Application | Python, PyQt

- Built a PyQt desktop application to automate data parsing, extraction, filtering, and formatting.
- Applied Python data-programming techniques to reduce repetitive manual processing steps.

Real-Time Input-Translation Engine | C#

- Developed an engine to remap and emulate controller input signals in real time.
- Applied AI-assisted development workflows to support code optimization and logic design.

Serverless Web Functions | JavaScript, Cloudflare Workers

- Implemented and deployed serverless web functions using Cloudflare Workers.
- Applied object-oriented programming principles while developing utility and automation features.

SKILLS

- Cybersecurity & IT Operations: Splunk SIEM, event-log analysis, incident-response workflows, network fundamentals
- Programming: Python, C#, JavaScript
- Data & Automation: PyQt, Pandas, Excel, data parsing, data formatting

ACHIEVEMENTS

Top 10 Finisher — Splunk Boss of the SOC (BOTS) (2025)

Distinction - Canadian Computing Competition (2025)
